Summary

PhD researcher in machine learning and computational statistics at the Cavendish Laboratory and Kavli Institute for Cosmology, University of Cambridge. My research looks at how the latest statistical and probabilistic machine learning methods, combined with distributed computing, can tackle previously intractable inference problems in physics. Primarily, I am focused on the statistical detection and characterisation of the cosmological 21-cm signal, but am more broadly motivated by the challenge of scaling statistical and numerical methods, both algorithmically and computationally, to ever larger datasets, parameter spaces and physical systems.

Education

Ph.D. in Physics — University of Cambridge, UK

Sept 2025 - Present

Developing scalable probabilistic machine learning and Bayesian inference methods to extract faint signals from noisy, high-dimensional and highly degenerate data in 21-cm cosmology. Selected for the Cavendish Frontiers Programme in AI for Scientific Discovery.

Supervisors: Prof Eloy de Lera Acedo and Dr Dominic Anstey

Awards & Funding

— **Harding Distinguished Postgraduate Scholarship** — Fully funded PhD scholarship supporting academically outstanding students across all disciplines.

— **Cavendish Scholarship** — Internal scholarship awarded by the Cavendish Laboratory to the top-ranked applicants to the PhD in Physics programme.

— **Compute Funding** — Main researcher on three UKRI AIRR Gateway grants totalling up to 30,000 GPU hours, valued at c.£100,000.

— **Travel Funding** — UKRI Digital Research Infrastructure Travel Grant and Jesus College Postgraduate Research Fund (2026).

MPhil in Data Intensive Science — University of Cambridge, UK

Oct 2024 - Aug 2025

Graduate research programme in statistical inference, machine learning and high-performance computing across DAMTP, the Department of Physics and the Institute of Astronomy. Thesis focused on unsupervised probabilistic modelling of the Milky Way's assembly history, alongside projects in cosmological inference from gravitational-wave detections and parameter-efficient adaptation of transformers.

Supervisors: Dr GyuChul Myeong, Prof Vasily Belokurov and Prof James Fergusson

Grades

— **Overall: High Distinction (85.2%)**

— **Including: Machine Learning Exam (93.3%) | Deep Learning Exam (97.7%)**

Awards & Funding

— **Jesus College Scholarship** — Awarded for outstanding academic achievement in the MPhil.

BSc in Physics — Durham University, UK

Oct 2021 - Sept 2024

Took modules across the Departments of Mathematical Sciences and Physics, with research projects in the Institute for Computational Cosmology and the Centre for Extragalactic Astronomy.

Grades

— **First Class Honours, 4th in Degree Programme (80%)**

Awards & Funding

— **Durham Physics Award** — Recognised exceptional academic performance, including placing 4th in the degree programme.

— **Defence STEM Undergraduate Scholarship** — Awarded by the British Army for leadership performance at the Army Officer Selection Board.

Professional Experience

Army Reservist — 4th Battalion, The Parachute Regiment, British Army — *2022 – Present*
Undertaking the Res. Commissioning Course at Royal Military Academy Sandhurst to lead a very high readiness airborne platoon (30 soldiers).

Investment Fellow — Entrepreneurs First — *Nov 2026 – Present*
Identifying and assessing technical founders and deep-tech startups across Cambridge.

Spring into Quant Finance — G-Research — *Mar – Apr 2026*
Selected from a graduate applicant pool with a $<$1% acceptance rate for G-Research's quantitative research spring internship programme.

Teaching

M1 Machine Learning, MPhil in Data Intensive Science, Graduate Supervisor — *Oct. 2026 – Present*
C1 Research Computing, MPhil in Data Intensive Science, Graduate Supervisor — *Oct. 2026 – Present*
S1 Statistical Methods, MPhil in Data Intensive Science, Graduate Supervisor — *Oct. 2025 – Present*
S2 Advanced Statistical Methods, MPhil in Data Intensive Science, Graduate Supervisor — *Oct. 2025 – Present*
Part IA Physics, Natural Sciences Tripos, Undergraduate Supervisor — *Oct. 2025 – Present*

REACH Annual Meeting, University of Cambridge • PDF

Skills

Statistics	Bayesian inference and model comparison, accelerated sampling, simulation-based inference, Gaussian processes
Machine Learning	Neural emulators, normalising flows, diffusion and flow-matching models, latent-variable models, NLP and fine-tuning
Computing	Multi-GPU and multi-node distribution, NVIDIA CUDA libraries, XLA FFI and custom JAX primitives
Languages	Python, C++, CUDA, JAX, PyTorch, TensorFlow, Bash, Git, LaTeX
